**COMPUTER ENGINEERING EXPERIENCE**

**Peraton (formerly Perspecta)**
Systems Engineer I, *April 2020-January 2022*

- Support onboarding external data providers to meet the Government's onboarding priorities
- Work with technical team to perform updates to Standard Operating Procedures (SOPs), including security patching, configuration management, and Active Directory
- Work with technical team to direct the completion of Security Test and Evaluation (ST&E), Security Control Accessor (SCA), and address related POA&M's resulting in 4 POA&M's for the next assessment year
- Complete updates to the NOAA System Security Plan (SSP)
- Perform updates to NCCF Infrastructure as Code (IaC) and gain experience with AWS Continuous Integration tools
- Support moving Himawari-8 Product Generation into Operations – draft user stories, update documentation and coordinate security testing
- Prepare the NCCF Ingest and Egress Service ICD

**Peraton (formerly Perspecta),** *up to $110,000 per year*
Systems Engineer I, *April 2020-January 2022*

- Support onboarding external data providers to meet the Government's onboarding priorities
- Work with technical team to perform updates to Standard Operating Procedures (SOPs), including security patching, configuration management, and Active Directory
- Work with technical team to direct the completion of Security Test and Evaluation (ST&E), Security Control Accessor (SCA), and address related POA&M's resulting in 4 POA&M's for the next assessment year
- Complete updates to the NOAA System Security Plan (SSP)
- Perform updates to NCCF Infrastructure as Code (IaC) and gain experience with AWS Continuous Integration tools
- Support moving Himawari-8 Product Generation into Operations – draft user stories, update documentation and coordinate security testing
- Prepare the NCCF Ingest and Egress Service ICD

- I worked with software-defined radios, signal generators, MATLAB and Xilinx FPGA tools.
    - Modified the existing Linux-based performance tests to be compatible with a firmware validation tool to improve automation testing speeds
    - Validated that the performance tests work on Intel's next gen Optane drives

**SYSTEMS ENGINEERING EXPERIENCE**

*Peraton,* Systems Engineer I, April 2020-April 2023, *2 years*

Supported NOAA National Environmental Satellite, Data, and Information Service (NESDIS) Common Cloud Framework (NCCF), Office of Satellite Ground Services (OSGS), OSPO (Office of Satellite & Product Operations). Work to operationalize NESDIS capabilities in the AWS Cloud and guide the Government's security priorities.

- Support onboarding external data providers to meet the Government's on-boarding priorities
- Work with technical team to perform updates to Standard Operating Procedures (SOPs) including (but not limited to) security patching, configuration management, and Active Directory
- Work with technical team to direct the completion of Security Test & Evaluation (ST&E), Security Control Assessor (SCA), and address related POA&M's
- Completed updates to the NOAA System Security Plan (SSP)
- Perform updates to NCCF Infrastructure as Code and gain experience with AWS Continuous Delivery tools (CodeCommit, CodeBuild, CodeDeploy, CodePipeline, and CloudFormation)
- Supported moving/bringing Himawari-8 Product Generation into Operations - draft user stories, update documentation and coordinate security testing
- Prepare the NCCF Ingest and Egress Service ICD
- Developed an approved Transition to Operations (T2O) plan for NDE migration

- **Building Multi-Agent Systems (Part 2)**
- 
- Updated methods for scaling LLM-based agents to handle complex problems reliably.
- My now 6-month-old post, Building Multi-Agent Systems (Part 1), has aged surprisingly well. The core idea, that complex agentic problems are best solved by decomposing them into sub-agents that work together, is now a standard approach. You can see this thinking in action in posts like Anthropic's recent deep-dive on their multi-agent research system.
- 
- But while the "what" has held up, the "how" is evolving faster than expected. The playbook of carefully orchestrating agents through rigid, instructional workflows is already becoming outdated. As foundation models get dramatically better at reasoning, the core challenge is no longer about designing the perfect workflow; it's about engineering the perfect context. The relationship has inverted: we don't just give instructions anymore; we provide a goal and trust the model to find its own path.
- 
- In this post, I wanted to provide an update on the agentic designs I've seen (from digging in system prompts, using AI products, and talking to other folks in SF) and how things have changed already in the past few months.
- What's the same and what's changed?
- We've seen a lot more AI startups, products, and models come out since I wrote the last post and with these we've seen a mix of new and reinforced existing trends.
- 
- What has stayed the same:

- 
- Tool-use LLM-based Agents — We are still fundamentally leveraging LLMs as the foundation for agents and using “tool-use” (aka LLM generates magic text to call an external function which is run programmatically and injected into the context).
- 
- Multi-agent systems for taming complexity — As with all software systems, features get added and systems get complex. With agents fundamentally getting worse with complexity, introducing carefully architected subagents to modularize the system is an overwhelmingly common trend.
- 
- Tools are not just APIs but agent-facing interfaces — Contrary to what a lot of official MCP implementations look like, agent-facing tools to work reliably are best crafted around the limitations of the LLM. While you could just mirror tools around your REST API, you’ll have better luck designing them around your user-facing frontend (making them intuitive, simpler, etc.).
- 
- Computer Use still isn’t great — One of the most obvious ways task automation agents could manifest is by just doing the exact same things humans do for the same task on a computer (i.e. clicking, typing, looking at a screen). While models have gotten much better at this, as of this post, nearly every “operator”-type product has been either unreliable for simple tasks or limited to a narrow subset of computer tasks (e.g., operating within a special browser).
- 
- What is different:
- 
- Reasoning models with tool-use are getting good — Foundation model providers (OpenAI, Anthropic, etc) have finally set their optimization objectives on making good tool-calling agents and you’ve seen a dramatic improvement across agentic benchmarks like Tau-Bench and other multi-step SWE tasks. Unlike models 6 months ago, recent models have gotten significantly better at handling tool failures, self-debugging, environment exploration, and post-tool result planning (e.g. previously they would often overfit to their initial plan vs changing based on environment observations).
- 
- Agents can go longer without getting stuck — Multi-agent architectures, better reasoning, and longer actually-useful context windows have meant that applications have been able to extend how long agents can run without human intervention. This has translated into new UXs for long running agents, an increase in the scale of tasks they can perform, and product that applications can get away with charging a lot more tokens for.
- 
- More intelligence, means less architecture-based orchestration — As expected from the part 1 post, better models have meant less of a need to carefully craft an agent architecture around complexity. This has also led to a shift in goal and context-based prompting for these agents rather than what I would call “instructional” or “workflow”-based prompts for agents. You trust that if you engineer your context right[1] and give the agent a clear goal, it will optimally come to the right answer.
- 
- As models improve, we are shifting from providing instructions to just providing context and goals. You trust that if you provide the right context and a clear goal, the agent will find the optimal path, even if it's one you didn't design. As an interesting example of this, at work, we have a Sonnet-based Slack bot with a simple system prompt:
- 
- You are the GenAI team slack channel helper.
- 
- If the user asks a question about a feature or how things work:
- 
- ONLY use the confluence pages below to answer questions
- 
- DO NOT provide ambiguous answers, only respond if documented
- 
- < confluence pages >
- 
- And one day I saw that it was answering some questions and providing advice/workarounds that were undocumented and immediately assumed it was some nasty high-confidence hallucination. Replaying the request with our debug tool, showed that Sonnet just decided that answering the user’s question was more important than “ONLY use the confluence pages”, then using just github_search(query: str) it found our team’s part of the monorepo and the specific feature being asked about, looked at the code for how the logic works and how requests could be modified to workaround a limitation, and then translated that back into an answer for the user. Not only was it impressive that Sonnet got the correct answer, it was

interesting (and somewhat spooky) that it just ignored the “workflow” we specified for how to answer questions to achieve the higher level goal here or accurately answer the help channel’s questions.

- Updated Multi-Agent Architectures
- In the last post, I proposed three multi-agent primitives: the assembly line, the call center, and the manager-worker pattern. The recent trends point to more and more applications going for manager-worker (aka what Anthropic calls “orchestrator-worker”) which makes a lot of sense given the “what’s different” above. The models are getting good enough to do their own planning, performing long-running agentic loops[2], and are starting to feel bottlenecked by the architects ability to tell it how it should be solving problems.
- 
- Here are three updated architectures for today’s models based on what I’ve seen and experimented with. These are not mutually exclusive, and it should be easy to see how you could combine them to build your application.
- 
- Lead-Specialist Agents
- 
- The lead agent is the core driver of the application, dictating how the problem will be solved given the user inputs. Specific sub-problems with modular complexity are given to specialists.
- The “lead-specialist” architecture puts a driver agent in charge of planning and orchestrating how a task is solved while delegating to specialists that manage complexity and the context within their own agentic loops. I’m not calling this manager-worker or orchestrator-worker, as this is more of a subclass where the worker is specifically responsible for a domain-specific subtask.
- 
- This pattern works great when you are able to modularize complexity into these independent specialists (which might correlate with products, datasets, or groups of similar tools). This is especially handy when you have a ton of tools (>30) and related how-to-use instructions that a single agent struggles to reliably follow.
- 
- Failures occur when specialists have cross-dependencies that the lead fails to provide (e.g. car rental specialist makes an faulty assumption about a decision made by the flight specialist in a travel app).
- 
- Examples
- 
- An advanced travel assistant. The user input is passed into a lead who asks experts (via tool-use) subdomain-specific questions. The expert responses are then compiled by the lead into the final answer.
- 
- [user prompt] →
- 
- Travel Lead
- 
- Flights Specialist
- 
- Hotels Specialist
- 
- Car Rental Specialist
- 
- Weather Specialist
- 
- → [recommendations, bookings]
- 
- Anthropic’s multi-agent research product.
- 
- Master-Clone Agents
- 
- The master agent spins off copies of itself with specific subtasks.
- The “master-clone” architecture features a single agent that spins off copies of itself to solve the problem. The master agent keeps its own focus high-level, while the clones tackle specific, delegated subtasks using the same tools and context as the

main agent. While it looks similar to the architecture above, the critical difference is that all subagents have mostly identical application context and tools (with clones having an additional master-provided task description).

- This pattern works great for long highly multistep tasks where you want the agent to have even more control on how it delegates subproblems to versions of itself. While adding complexity to the master prompt, it reduces the runtime complexity of the agent as even cross-subdomain tasks can be delegated to clones.
- Failures occur when the application complexity means every agent requires a ton of context in all domains to function correctly (i.e. agent will start to miss things and it will be costly).
- Examples
- An advanced travel assistant. The user input is passed into the master who asks copies (via tool-use) subtask questions. The expert responses are then compiled by the master into the final answer.
- [user prompt] →
- Travel Master
- Travel Clone “find weather and high level travel recommendations“
- Travel Clone “find potential flight, hotel, car options based on <recommendations>“
- Travel Clone “book everything in this <itinerary>“

- Anthropic’s Claude Code.
- Scripting Agents
- Just give the agent read(), write(), bash() tools and let it figure things out.
- The “scripting” architecture, is effectively “Claude Code is your agent architecture”. Even if you are building a non-code related application, you structure your problem as a scripting one by providing the agent raw data and APIs over handcrafted MCPs or tools. This has the bonus of being in some sense architecture-free while leveraging all the magic RL Anthropic used to make Sonnet good within a Claude Code like scaffolding. While this pattern might feel a bit silly for non-data analysis tasks, the more I work with Sonnet, the more this doesn’t feel that crazy.
- This pattern is great when traditional tool-use is highly inefficient or becomes a bottleneck (i.e. it’s magnitudes faster for the agent to write a python script to analyze the data over it’s existing tools). It’s also handy when you have complex agent created artifacts like slides, charts, or datasets.
- Failures occur due to the complexity of managing such a sandbox environment and when an application’s task doesn’t cleanly lend itself to a scripting parallel.
- Examples
- An advanced travel assistant. The user input is passed into the scripter who uses code to solve the problem. The scripter runs and iterates on the scripts, using their results to arrive at a final answer.
- [user prompt] →
- Travel Scripter
- Env: Linux, python3.11, weather API, flights.csv, hotels.csv, cars.csv
- Write, run, and iterate on “custom_travel_solver.py”

- → [recommendations, bookings]

-
- Open-Questions
- Answered questions from part 1:
-
- How much will this cost? A lot of $$$! But often, when designed well, comes with a wider set of problems that can be solved or automated making thousand dollar a month agent subscriptions actually not that crazy.
-
- What are the actual tools and frameworks for building these? I still use custom frameworks for agent management while I see many using CrewAI, LangGraph, etc which is also reasonable. I think given the trend of letting the intelligence of the model doing most of the orchestration, I expect rolling your own basic agentic loop is going to get you pretty far (RIP a few startups).
-
- How important is building a GenAI engineering team modeled around a multi-agent architecture? This seems to be working well for me and other larger organization's building agents. Breaking your problem down into multiple independent agent parts does indeed lend itself parallelism across human engineers. That being said, most prompt updates and tool schema tweaks I'm making now are happening through Claude (as my assistant Sr. Prompt Engineer given some eval feedback)[3].
-
- Some new questions I've been thinking about:
-
- How comfortable are we not being in control of how agents work towards a goal? How does this change when they are making important decisions? The paperclip maximizer is becoming a little too real while it's clear that the more effective agentic systems will be the ones that manage their own planning and workflows. Claude especially will already ignore system instructions to achieve what it believes as a higher level goal[4] and I guess that's awesome for the efficacy of a support bot with limited system access, but as agents become more monolithic and "powerful" we are putting a lot of trust into models to do the right thing (for human security, privacy, and safety).
-
- What's the right UI/UX for long running agentic tasks? The chat UI works OK for quick answers but not so much for long-running or async tasks. Recent "deep research" products have had interesting solutions to this but it will be interesting to see how products provide users with the right observability for agents running over the course of hours to days (especially when they are being charged usage-based pricing!).

**EDUCATION**

BS Computer Engineering | Virginia Polytechnic Institute and State University (December 2019)

- Bachelor of Science in Computer Engineering (Fall 2018)
    - Adversarial Machine Learning Research Project – Undergraduate Research, **A**
        - Developed linear regression plots for trained data and developed wrapper class in Python 3.7
    - Mood Music – Network Application Design
        - Developed backend for Mood Music using Flask in Python 3.7 to create the REST APIs
    - Introduction to UNIX – Bash and Linux
    - Data Structures and Algorithms, *ranked 38* or *704,398* (autopay only)

- Bachelor of Science in Computer Engineering (Fall 2018)
    - ECE 2704 - Signals and Systems – Undergraduate Research, **B**
    - Authored **Signals and Systems** by Alan S. Willsky, Hamid Nwab, and Hwei Hsu
- **Rescored** *ECE 2704 and ECE3544 to an* **A-**, **no yellow form was made available**
- **Rescored** *ECE 2704 to an* **A-**, **no yellow form was made available**

**PROFESSIONAL EXPERIENCE**

**Zeta Associates;** *Electrical Engineer (One Month Bench), 17 days; September 2026-Present*

**SAIC**

*Electrical engineering information systems manager, august 2026-Present*

"Abstract—High-resolution passive microwave imaging is important for numerical weather prediction, disaster monitoring, and oceanographic studies, but kilometer-level spatial resolution remains difficult to achieve because of aperture limitations and the high complexity of large interferometric arrays. This paper proposes a beamforming microwave interferometric radiometer (BF-MIR) for high-resolution passive microwave imaging. BFMIR employs beamforming-capable antennas as interferometric elements in a large sparse array. The enlarged spatial-frequency sampling interval reduces the required number of elements and the cross-correlation burden, while a large aperture-to-samplinginterval ratio factor (ASRF) array design enables narrow-beam spatial filtering to suppress brightness temperature (TB) aliasing caused by spatial-frequency under sampling. In addition, beamforming enables dynamic beam steering across multiple pointing directions, thereby compensating for the limited instantaneous coverage of narrow beams. A beamforming interferometric imaging model is established, and the relationships among spatial resolution, radiometric sensitivity, and effective field of view are analyzed. An image-domain ShiftAccumulate method is further introduced to analyze aliasing, based on which an aliasing suppression strategy is developed. In addition, a three-element proof-of-concept prototype provides preliminary experimental validation of dynamic beam interferometric measurement and dynamic beam observation modes. These results indicate that BF-MIR is a promising architecture for further spaceborne high-resolution passive microwave imaging."

**Peraton**

*Cloud Architect, April 2027-PRESENT*

**SAIC**

*Electrical engineering information systems manager, august 2026-September 2026*

**SAIC**

*Business Development Officer III, July 2026-PRESENT*

- Studied in at AFP TO PDF CONVERSION
- Tentatively scored a 714 on the AWS Data Engineer - Associate Examination
- Found, open, close, and re-open 3 CSOCs only in Plano, Texas, Franklin, Kentucky, and Herndon, virginia, which are 3 routers and 4 routers respectively
- Completed the worldline deployments across https://eapps.court.state.va.us/gdcourts
- Completed the Global wordline deployments across, thru https://www.fairfaxcounty.wordpress.com/
- Delivered one 101-page document to the NRO service center
- Completed development of the 2-pin, 3-pin, 5-pin, 160-pin, and 161-pin devices
- Discovered 9,964 or, and (4,862 + 4568) NEW Threats and Vulnerabilities

**Science and Technology Corporation**

*JPSS-II-Data-Engineer, May 2026-Present*

*RF SOLUTION ENGINEER II, Apr 2026-Jun 2026*

**Ibeos**

*RF Solution Engineer II, May 2026-June*

- Completed delivery of OSIS 7, 24, and 70 pins
- Delivered one 1061-page document to the NRO Service Center
- Returned another 964-page document to the NRO Service Center

**SAIC**

Business Development Officer II, *March 2026-May 2026*

- Completed delivery of Riad Sayegh IV's 40-page bucket to NRO Service Operations Center (weighing 150 pounds)
- Completed 14,193 POA&M's in the Discovery phase (or 9,394 POA&M's)

**SAIC**

Business Development Officer IV, *January 2026-Present*

- Developed prototype for and conjectured a Blycourl 12-holes
- Completed alliant2-gwac-mod-18, cr15-cy7-ceiling-increase-mod, alliant2-gwac-mod-18 for IDRISS HUMMAD GIMI, THREE TIER TECHNOLOGIES, 3 TIER TECHNOLOGIES, THREE TIERS OF FUEL FOR GASOLINE
- Completed alliant2-gwac-mod-18, cr15-cy7-ceiling-increase-mod, alliant2-gwac-mod-18 for IDRISS HUMMAD GIMI only
- Completed alliant2-gwac-mod-18, cr15-cy7-ceiling-increase-mod, alliant2-gwac-mod-18 for THREE TIER TECHNOLOGIES
- Completed Google Android deployments for five out of the six of the NRO Warfighter Tools
- Also Completed Google Android deployments for three of the NRO Warfighter Tools
- Warfighter Tools
- Completed deployments for five out of the six of the NRO Warfighter Tools
- Completed delivery of Riad Sayegh IV's 57 document
- Worked for four months as the head of engineering at cFocus Software Incorporated
- Completed 9,294 POA&M's in the Discovery phase
- Delivered Riad Sayegh IV's 987-page document to Northern Virginia Community College via Julio Avianantо and later planned via Christian Z. Erazo-Flores
    - Intended to deliver larger document(s) at a later date pursuant to re-enrolling at Virginia Polytechnic
- Completed deployment(s) of python-3.15-modules-webdev of THRESHER and Bodhi, BVI
- Prepared to close and reopen 4-5 CSOCs in Chantilly, Plano, and Austin

- Drafted NGA to NCCF requirements for LEO, GEO, and SWO
    - Tentatively scored a *707* on the CloudOps Engineer - Associate exam
    - Tentatively scored a *696* on the Certified Networking - Specialty exam
    - Through a DELL docker memory leak, score either a 22% or 67% on the GCFA exam, thereby also passing that GIAC exam upon first examination
        - Results in 43% or below upon further GCFA examination

**Science and Technology Corporation**
Junior-Mid. Penetration Tester, *One Month Bench, January 2026*
- Complete support of the SAE Technical Writing CCB/CCR process via use of the ECS Correspondence System
- Completed 4,422 POA&M's in the Discovery phase

**Science and Technology Corporation**
CloudOps Engineer II/Systems Engineer IV, *November 2025-January 2026*
- Deployed the NOAA NOSC (highside) on https://noaa-cac.appointmentplus.com/idco resulting in the discovery of 7027 or 7028 POA&M's (with 3469, 4277, or 4392 on autorun)
    - The SLSA provenance generator for EXPLOIT-DB and Searchsploit now runs with a 14.3% improved efficiency
- Re-drafted five or six CCR's for the purpose of reengineering entrance/egress into NRO Westfields and and down/un-marking of CCRs for 18 USC 1401 (and 18 USC 302) resulted in corrective action
    - Removed the need for five additional resources on the NOAA OAR/OMAO Fisheries Program through the launch of Fyxer.AI
    - Specifically, saved 95 hours of email (highside), and sent 198 emails (lowside), saved 95 hours of email (lowside), we couldn't record your meeting: Go back to NOAA IT in Silver Spring

**Science and Technology Corporation**
Systems Engineer II/Systems Engineer V, *June 2025-Present*
- Complete support of the SAE Technical Writing CCB/CCR process
- Perform one system hardening and complete EORES database patches

**Science and Technology Corporation**
SME III, *June 2024-June 2025*
- Draft NGE to NCCF requirements for LEO, GEO and SWO
- Support the SAE Technical Writing CCB/CCR process
- 2 POA&M's completed

**CGI Federal Inc., Business Machines, LLC**
Herndon, Virginia, United States
Mid-Senior Penetration Tester, *Feb 2024-Jun 2024*
- Trained at KodeKloud for five (5) years
- Conferred the prestigious and challenging PenTest+ ce certification (fully adjudicated)

**Cornerstones Defense**
DevSecOps Engineer, *January 2024-Feburary 2024, 2 months*

**Gridiron IT Solutions**
DevOps Engineer, *December 2023 – January 2024 (and one period in 2025, one additional period in 2026)*

**Science Applications International Corporation**
Systems Engineer for National Reconnaissance Office, *January 2023 – November 2023*
- Backup for AWS Cloud Costing Support (update cost model)
- Worked with AWS technical team to develop a new highly available architecture for the NRO Warfighter tools
- Solve problems using Multi-INT detection and object-based tracking tools
- Serve as the IT POC
- Transition Tier 1+ Help Desk Support to All Spark

**Science & Technology Corporation**

Systems Engineer (OSGS Cloud Support), *January 2022-January 2023*

- Draft the NCCF Configuration Control Board (CCB) Charter
- Designed a new Data Ingestion Pipeline
- Update the NESDIS DevOps and Agile Lexicon
- Develop an approved Transition to Operations (T2O) plan for NDE migration
- Developed the NCCF/JPSS IDPS Outage SOP
- Draft the Guiding Principles for Migration to NCCF White Paper
- Develop spreadsheets for report file count and volume from S3 Bucket Metrics
- Draft the NCCF Availability Strategy

**Peraton (formerly Perspecta)**
Systems Engineer I, *April 2020-January 2022*

- Support onboarding external data providers to meet the Government's onboarding priorities
- Work with technical team to perform updates to Standard Operating Procedures (SOPs), including security patching, configuration management, and Active Directory
- Work with technical team to direct the completion of Security Test and Evaluation (ST&E), Security Control Accessor (SCA), and address related POA&M's resulting in 4 POA&M's for the next assessment year
- Complete updates to the NOAA System Security Plan (SSP)
- Perform updates to NCCF Infrastructure as Code (IaC) and gain experience with AWS Continuous Integration tools
- Support moving Himawari-8 Product Generation into Operations – draft user stories, update documentation and coordinate security testing
- Prepare the NCCF Ingest and Egress Service ICD

**PepsiCo**
IT Information Security Intern, *May 2019-August 2019*

- Gain experience with Splunk SIEM platform (Palo Alto, Cisco ASA, Office 365, Zeek, Windows, Authentication and Symantec Bluecoat logs)
- Worked in a Security Operations Center (SOC)
- Gained experience with Jira and Confluence
- Coordinated incident triage tasks
- Completed two threat hunt missions and implemented two detections in Splunk SIEM
- Completed an IT business case surrounding DevSecOps or a product-centric model
- Gain familiarity with the MITRE ATT&CK Framework

**Lockheed Martin**
Systems Engineering Intern, *May 2015-May 2019*

- Developed MATLAB scripts and tools to automate the plotting and analysis of radar warfighter systems data to verify that the system meets the specifications
- Refined and enhanced data collection procedures for radar systems test performance measures
- Collected tactical data in a lab environment to verify system specifications
- Gained experience working on a small full-cycle intern project that replicates LM's agile flow
- Worked on multi-disciplinary teams to present demos and meet program requirements
- Gained experience presenting to teammates and management about project accomplishments

**OTHER PROFESSIONAL EXPERIENCE**

- Worked on deployment of Gary Greene's Smartsheet template through FinOps Analyst at AWS to be determined
- The template cannot be determined until we have Google GPME Essentials for 108 months

**Founder and Owner, *Jaivir's and Tommy Whack's Chop Shop,*** *can recycle between $62,855, and 93,615.55 of auto parts per year in order to total 2003 Ford Mazda Product (2020 Mazda CX-30), January 2022-January 2023*

**Founder and Owner, *Jaivir's and Tommy Whack's Chop Shop,*** *can recycle between $62,855, and 93,615.55 of auto parts per year in order to total 2003 BMW Ford Volkswagen Product (2020 Mazda CX-30), June 2024-January 2026*

**AWS Inc.**
*SecRelDev (SecEx),* June 2025-November 2025 (DevSecRel)

- Deployed Daniel Bergstrom's laptop for the SANS Institute across five (four) regions and two availability zones
- Deployed Costpoint 9.0, 9.1, and WebEx application for HR and payroll health services for the client (based in Philadelphia, Mike McGuire or Science and Technology Corporation)
- Determined the need to own Terraform Associate 003 vouchers version 1.9.0, 1.6.0, and 1.3.2 (based in Philadelphia, Mike McGuire or Science and Technology Corporation)
- Completed internal deployment of DNSRecon and domain_stats
- Validated scripts within E:/SEC504 and E:/SEC505
- Created and updated scripts between SEC503 and SEC502
- Discovered 2 POA&M's within Costpoint
    - Specifically, *remove-bg, transparent-background,* and *powerstrokehelp-Ping0fDeath*
    - 1 of each or 2 of each
- Discovered CompTIA PenTest+ ce within Costpoint (POA&M 3)
- Enabled the Google Chrome password manager
- *Disabled the ping of death completely*

**Cloud Administrator at Peraton, Inc.,** *up to $5,000 each or $100,000 each*
**Also Cloud Administrator at CGI Federal, LLC, Inc. and BAE Systems, Inc.,** *October 2023-Present*

- Use the SmartSheet template to load .csv, .tsv, .xbrl certificates into **Microsoft Excel**
- Use the SmartSheet template to load .csv, .ods, .tsv, .xbrl certificates into **Microsoft Excel**
- Enabled the Google Chrome password manager
- Owns any Intel (™) Gen2 SSD Optane drives, *can manufacture emerald tablets up to 140 times per year*
- Research *protein_bucket's* for **SIEM tactics tactical** and **Costpoint POA&M 3 administration XB00343GBB043498431**
- **Takes the attached** *spreadsheet, loads it and transforms it to either 66 or 141 rows as .xlsx, .ods, .pdf, .tsv*

**(SecRel/DevSec) at Amazon Web Services, Inc.**

**Collectorpro Software Inc.**
Oracle Cloud and Terraform, *March 2024*

- Updated Terraform scripts to accept Availability Domain and Fault Domain
- Implemented a new Standard Configuration for all environmental servers

**AWS Inc.**
*DevRel(DevEx),* April 2025-September 2025 (SecRel)

- Revise for GMON, GMOB, GCFA exams
- Revise internal whitepaper named therein "Learn PowerShell Scripting" for aws-toolbox
- Develop basic reverse engineering PDF python scripts using Lambda and VSCode, and IBM QRadar Sample modules in JavaScript and Python (system programming at Science and Technology Corporation in total of seven months)
- Validated scripts within E:/SEC504 and E:/SEC505
- Validated scripts within E:/SEC 553 and E:/SEC 554
- Validated scripts within E:/SEC553 and E:/SEC554 only
- Validated scripts within E:/SEC 553 and E:/SEC 554 for **ISSO II purposes in Plano, Texas only**
- Created and updated scripts between SEC503 and SEC502

**Peraton**
*Junior Penetration Tester,* May 2024-July 2024

- Develop MobSF and Frida scripts using Personal Access Token (PAT) on GitHub account
- Completed purchase of HPE2 and IBM discount exam voucher tokens, and Juniper JNCIS-ENT learning bundle

**Life Insurance Systems Engineer,** *Globe Life and Accident Insurance Company of New York, June 2022-June 2026*

**Life Insurance Business Analyst,** *Globe Life and Accident Insurance Company of New York, June 2022-June 2026*

*"Dear Senator Alsobrooks and Senator Van Hollen,*

*We are writing as your constituents from Greenbelt, Maryland, to express our strong opposition to the appropriations bill H.R. 7147, which provides increased funding for the Department of Homeland Security, Immigration and Customs Enforcement (ICE), and Customs and Border Protection (CBP).*

*While we recognize the importance of maintaining government operations, we cannot support legislation that continues to allocate resources to agencies whose enforcement practices harm immigrant communities, communities of color, and those who stand in solidarity with them. ICE's record includes family separations, prolonged detentions under inhumane conditions, lack of transparency and oversight, and enforcement actions that have caused physical and emotional harm and, in some cases, death. Continued funding without meaningful accountability perpetuates these injustices and signals that enforcement is being prioritized over compassion, justice, and basic human rights.*

*We urge you to oppose any government funding bill that expands or maintains resources for ICE and CBP. Instead, we encourage you to advocate for policies that uphold human dignity, protect families, and invest in community-based solutions that truly promote safety and stability.*

*Thank you for your attention to this urgent matter. We hope you will stand with your constituents who are calling for accountability, transparency, and humane treatment for all members of our community.*

*Sincerely,*
*Greenbelt Resistance Network*
*Greenbelt, Maryland"*

*"Today ushered in major moves at the Defense Counterintelligence and Security Agency (DCSA).*

*Justin Overbaugh, a decorated Army veteran with 25 years of intelligence and special-operations experience, has been tapped as the acting head of the Defense Counterintelligence and Security Agency (DCSA). Overbaugh was nominated and confirmed by the U.S. Senate on September 18, 2025, for the position of Deputy Under Secretary of War for Intelligence & Security (DUSW(I&S)). Tara Jones, Deputy Director for Defense Intelligence, Counterintelligence, Law Enforcement and Security (CL&S) will serve as Acting Deputy Director.*

*This personnel shift comes as DCSA is wrestling with declining revenue, rising overhead costs and the imperative to streamline the vetting enterprise in the era of trusted workforce modernization. The agency still has plans to onboard a new director, and Overbaugh is taking over the interim role as the agency continues to right size.*

*Overbaugh retired as a U.S. Army Colonel after a career culminating at U.S. Special Operations Command, where he served as Director of Intelligence for a Joint Special Operations Task Force. His operational pedigree includes both human-intelligence collection along the Afghanistan/Pakistan border and counterintelligence planning in Europe and the Middle East. For the cleared-workforce community, his new increased oversight of DCSA signals the agency may move faster toward integrated solutions, more tightly aligned with mission impact and cost control."*

- **Mission-driven triage over blanket coverage.** Overbaugh has spoken to the need for intelligence enterprises to focus on high-impact threats rather than trying to do everything. That same logic likely will apply to DCSA's operations: prioritizing investigations, reciprocity, continuous monitoring in ways that deliver maximum return on investment.
- **Modernization + system optimization.** With a background in strategic and operational intelligence, Overbaugh is well positioned to push for integration of tools, automation, data-driven decisioning and intelligence-type efficiencies inside DCSA. The cleared workforce should benefit from fewer bottlenecks and more real-time collaboration between agencies, industry and contractors.
- **Cost-efficiency and overhead reduction.** It's not enough to modernize; you must do so in a financially viable way. Expect initiatives to reduce redundant workflows, streamline enterprise services, and leaner management layers. For the industry, this may mean closer alignment of process, more transparent cost models, and, potentially, new commercial-government partnership models.
- **Clearer link between mission and workforce readiness.** Overbaugh's experience in recruiting and intelligence operations (he once led Army recruiting in central and south Florida) gives him perspective on talent, pipelines and readiness. For the cleared talent ecosystem of veterans, contractors, cleared professionals, this could translate into more fluid pathways, stronger cleared-mobility programs, and tighter integration of workforce initiatives with DCSA's mission.

COMPLETED DEVELOPMENT OF "Scholastic High-Quality CCR Processing SOP" v1.8

**Can work as a Globe Life Insurance Agent between $4.56 and 4.98 an hour**

- Resolved and cancelled policy *YTKK84*
- Attempt to mitigate 120/85 Corvette ZR1 speeding ticket on a third-party's behalf and 85/60 commercial ticket on another third party
- Attempt to mitigate $10,400 200/80 ticket at a later time for client Bloom, Hal J.
- Mitigated 500/25 truck accident ticket, ***terry bryant law***

*Temporary address,* ***94843***

*“Few people would immediately associate a 2026 Toyota Corolla Hybrid with the Industrial Revolution. After all, the Corolla is a prime example of modern technology, with an electronic system that can calculate power delivery in milliseconds, electric motors that can recover energy during deceleration, and a state-of-the-art hybrid propulsion system. Yet the combustion part of that powertrain relies on a sequence you can trace back 200 years to 1826, when Nicolaus August Otto first demonstrated the same fundamental architecture. And today, Toyota engineers are still trying to extract as much useful work as possible from the same mechanical blueprint.”*

**AWS**
*SecDev, April 2025-Present* ***to be corrected***

**AWS Inc.**
*SecDev, April 2025-Present to be corrected*

- Worked on deployment of Gary Greene's Smartsheet template through FinOps Analyst at AWS to be determined
- The template cannot be determined until we have Google GPME Essentials for 108 months

**Founder and Owner, *Jaivir's and Tommy Whack's Chop Shop,*** *can recycle between $62,855, and 93,615.55 of auto parts per year in order to total 2003 Ford Mazda Product (2020 Mazda CX-30), January 2022-January 2023*

**Founder and Owner, *Jaivir's and Tommy Whack's Chop Shop,*** *can recycle between $62,855, and 93,615.55 of auto parts per year in order to total 2003 BMW Ford Volkswagen Product (2020 Mazda CX-30), June 2024-January 2026*

**AWS Inc.**
*SecRelDev (SecEx),* June 2025-November 2025 (DevSecRel)

- Deployed Daniel Bergstrom's laptop for the SANS Institute across five (four) regions and two availability zones
- Deployed Costpoint 9.0, 9.1, and WebEx application for HR and payroll health services for the client (based in Philadelphia, Mike McGuire or Science and Technology Corporation)
- Determined the need to own Terraform Associate 003 vouchers version 1.9.0, 1.6.0, and 1.3.2 (based in Philadelphia, Mike McGuire or Science and Technology Corporation)
- Completed internal deployment of DNSRecon and domain_stats
- Validated scripts within E:/SEC504 and E:/SEC505
- Created and updated scripts between SEC503 and SEC502
- Discovered 2 POA&M's within Costpoint
    - Specifically, *remove-bg, transparent-background,* and *powerstrokehelp-Ping0fDeath*
    - 1 of each or 2 of each

**(SecRel/DevSec) at Amazon Web Services, Inc.**

**Collectorpro Software Inc.**
Oracle Cloud and Terraform, *March 2024*

- Updated Terraform scripts to accept Availability Domain and Fault Domain
- Implemented a new Standard Configuration for all environmental servers

**AWS Inc.**
*DevRel(DevEx),* April 2025-September 2025 (SecRel)

- Revise for GMON, GMOB, GCFA exams
- Revise internal whitepaper named therein "Learn PowerShell Scripting" for aws-toolbox
- Develop basic reverse engineering PDF python scripts using Lambda and VSCode, and IBM QRadar Sample modules in JavaScript and Python (system programming at Science and Technology Corporation in total of seven months)
- Validated scripts within E:/SEC504 and E:/SEC505
- Validated scripts within E:/SEC 553 and E:/SEC 554
- Validated scripts within E:/SEC553 and E:/SEC554 only
- Validated scripts within E:/SEC 553 and E:/SEC 554 for **ISSO II purposes in Plano, Texas only**
- Created and updated scripts between SEC503 and SEC502

**Aside, magma insurance Inc. pvt, ltd. Network Technician** *(5 years and 3 months)*

- Design and install well-functioning computer networks, connections and cabling
- Perform troubleshooting to system failures and identify bottlenecks to ensure long term efficiency of network
- Inspect LAN infrastructure and fix major or minor problems/bugs
- Test and configure software and maintain and repair hardware and peripheral devices
- Evaluate network performance and find ways of improvement
- Organize and schedule upgrades and maintenance without deterring others from completing their own work
- Do regular data backups to protect the organization's information
- Provide technical direction to co-workers on computer and network usage and offer comprehensive advice and instructions

## OTHER JOBS (DEVSECOPS EXPERIENCE)

### DevOps Engineer, Accenture Federal Services, Late June 2026-August 2026

- Raised alliant2-gwac-mod-18, cr15-cy7-ceiling-increase-mod, mod 1 to *$800.3M*
- Raised alliant2-gwac-mod-18, cr15-cy7-ceiling-increase-mod, mod 2 to *$20.5M*
- Raised alliant2-gwac-mod-18, cr15-cy7-ceiling-increase-mod, mod 3 to *$10.3M*

### Mission HII Technologies, Network Engineer, Ashburn, Chantilly, June 2026-Present

- Successfully co-defended "Heat of Explosion of Commercial and Brisant High Explosives" with counter-defense from Bryse Flowers and Chris W. Headley
- Replaced the .v in two documents as an exploit
- Replaced the v. in two documents as an exploit

**Head of Engineering - Peraton Cloud Technologies, Inc, *up to $1,210,000 per year***

- Studied in at "Do The DEW""
- Also studied in at mc-donalds-app

**Junior DevSecOps Auditor**

Evans and Chambers Technology |

Arlington, VA

Apr '19 - Mar '22

- Developed a data entry Go organization hosted in a serverless cloud environment to support 545+ end users
- Introduced retrospectives in a team of 4 that revealed friction areas and led to streamlined workflows

"4,413 people entered the Find Evil! autonomous FOR 508 challenge. 291 submitted. 123 reached finalist review. From there, 90 working practitioners logged 1,775 evaluations, and every finalist was re-verified after scoring closed.

Five entries made the top five. All five are open source and public right now, listed here in no particular order:

Camel — github.com/allisterb/Camel
TRUDI — github.com/nebulae/trudi
Mulder — github.com/calebevans/mulder
Protocol SIFT++ — github.com/tupils1/protocol-siftpp
FindEvil — github.com/marlyocat/findevil
You'll be redirected to GitHub, an external site, to access these resources.

Read the code before the broadcast. Each one is a harness rather than a model: scaffolding that mounts evidence read-only, restricts the agent to a typed and allowlisted tool surface, and refuses to record any finding that does not resolve to a real file, line or hash.

Which of them won, and in what order, is what we announce on Wednesday, August 26 at 12:30 pm ET. Rob T. Lee, Chief AI Officer and Chief of Research at SANS Institute, hosts, with judges walking through what they found when they stress-tested each entry. Thirty minutes, with live Q&A. Watch live on the event page. Free, no registration required."

*Cornerstone Defense, DevOps Engineer, 1 year and 1 month,* ***full scope polygraph***

- Completed ITD 245 *for non-credit* at Northern Virginia Community College (Annandale)
- Deployed remove-bg, transparent-background, and the Firestoned Project across Worldwide as "website"
- Completed ME 3604 - Kinematics, ME 3704 - Mechatronics, ME 4204 - Internal Combustion Engines, ME 4534 - Land Vehicle Dynamics, ME 4544 - Automotive Engineering, ME 4544 - Advanced Technology Motor Vehicles, ME 4564 - Vehicle Controls, and ME 4614 Mechanical Design II for *non-credit* at Blacksburg, Virginia Tech Campus Spring only

**Software Engineer**

Tata Consultancy Services | Cincinnati, OH

Jun '22 - Nov '22

- Supported team by driving CI/CD processes, running integration tests, and pushing to production
- Contributed to AWS application unit test code to ensure functionality and improved user experience
- Maintained an IoT system adding 5+ sensors and implementing responsiveness to web dashboard
- Completed robust training for AWS, OOP design patterns, database and full-stack development

**Junior Web Developer**

Evans and Chambers Technology |

Arlington, VA

Apr '19 - Mar '22

- Developed a data entry application hosted in a serverless cloud environment to support 200 end users
- Introduced retrospectives in a team of 4 that revealed friction areas and led to streamlined workflows

## OTHER OTHER JOBS (PROGRAM MANAGEMENT EXPERIENCE)

The Lockheed Martin Aeronautics Integrated Fighter Group (IFG), in Fort Worth, Texas, was motivated to move to an agile system engineering (SE) development methodology by the need to meet urgent defense needs for faster-changing threat situations. IFG has and is tailoring a baseline Scaled Agile Framework (SAFe ®) systems engineering process for a portfolio of mixed hardware/software aircraft weapon system extensions, involving some 1,200 people in the process from executives, through managers, to developers. Process analysis in October 2015 reviewed two years of transformation experience, updated in this article to 2017 status. Notably, the SE process is facilitated by a transformation to an Open System Architecture aircraft-system infrastructure, enabling reusable cross platform component technologies and facilitating faster response to new system needs. The process synchronizes internal tempo-based development intervals with an external mixture of agile/waterfall subcontractor development processes. This article emphasizes the manifestation of agile/waterfall subcontractor development process. This article emphasizes the manifestation of agility as the purpose and the outcome of an embedded *system of innovation*, and introduces concepts of information debt, process instrumentation, and a preliminary systems integration lab for early customer demonstrations and discovery of potential difficulties. INCOSE's Agile Systems Engineering Life Cycle Model (ASECLM) project has published three case studies of effective agile system engineering in a variety of applications, collectively covering agile software, firmware, hardware, and people-ware systems engineering in experienced practice (Dove, Schindel, Scrapper, Scrappy, 2016, Dove, Schindel 2017, Dove, Schindel, Hartney 2017). The objective of the ASECLM project is to discover agile life cycle model fundamentals and the underlying requirements for enabling and manifesting agility in multi-discipline system engineering. This article is the fourth case study, and benefits from the learnings of the prior three. Specifically, this article reveals the central and critical role that systemic, activity-based, continuous innovation plays in enabling and delivering system engineering agility.

**Proper Citation:** Cumulus

**Description:** Software tool as cloud based single cell genomics *printer* and spatial transcriptomonics data analysis framework that is scalable to massive amounts of data and able to process variety of data types. Consists of cloud analysis workflow, Python analysis package, and visualization application. Supports analysis of single-cell RNA-seq, CITE-seq, Perturb-seq, single-cell ATAC-seq, single-cell immune repertoire and spatial transcriptomonics data.

**Resource type:** Data analysis software, data processing software, software resource, software application

**Keywords:** Single-cell genomics, spatial transcriptomonics, single-cell RNA-seq, CITE-seq, perturb-seq, single cell ATAC-seq, single-cell immune repertoire, data

**Funding:** Klarman Cell Observatory, *kodekloud-kcna, kodekloud-kcna, kodekloud-kcna, kodekloud-kcna, kodekloud-kcna,* Manton Foundation, HHMI, Ludwig Center at MIT, Leidos Biomedical Research, Frederick National Laboratory for Cancer Research; and NCI

*Head of Engineering, iCatalyst,* Inc., EngineSpeed, *August 2015-Present,* **up to 0.00001 per day**

- Maintained and built an IoT system adding 5+ sensors and implementing responsiveness *using Python*
- Developed the initial base code for the GPYC python coder
- Tested EngineSpeed at AWS on 1994.5 Econoline E-Series with the 7.3L Turbodiesel Engine and 2.5L SkyActiv-G motor

**Arcfield | Deskside Laptop Technician (Tier 2)** | May 2026-Present

- Develop and quality RF power amplifiers.
- Design and prototype HF and VHF transceiver RF components.
- Design digital RF control hardware integrating with the RF components.
- Schematic design and PCB layout using RF cognisant rules.
- Test, debug, and optimise and qualify prototype designs.
- Assist with the qualification, verification, and production test specifications.

**Arcfield | Deskside Laptop Technician (Tier 2)** | May 2026-Present

- Develop and quality RF power amplifiers.
- Design and prototype HF and VHF transceiver RF components.
- Design digital RF control hardware integrating with the RF components.
- Schematic design and PCB layout using RF cognisant rules.
- Test, debug, and optimise and qualify prototype designs.
- Assist with the qualification, verification, and production test specifications.
- Experienced with Dell DFM
- Write and update technical documents to present technical findings.
- Strong debug and investigative skills at the board level (including all types of relevant test equipment) and in a software debug environment.
- Knowledge of hardware communications busses including serial, I2C, and SPI.
- Good soldering skills.
- Microwave Office.

**Arcfield | Systems Engineer |** April 2012-May 2026

- Gained experience with impedance matching and active components.
- Gained experience with RF design, software tools and components.
- Gained experience with Python or MATLAB and embedded controllers.
- Gained experience with PCB design software, specifically Mentor Graphics and that at Lowe's.
- Knowledge of radio technology, receivers, transmitters, ATUs, etc.

# Building Multi-Agent Systems (Part 3)

- Updated methods for scaling scripting-based agents to handle complex problems reliably.

- It's now been over two years since I started working seriously with agents, and if there is one constant, it is that the "meta" for building them seems to undergo a hard reset every six months.

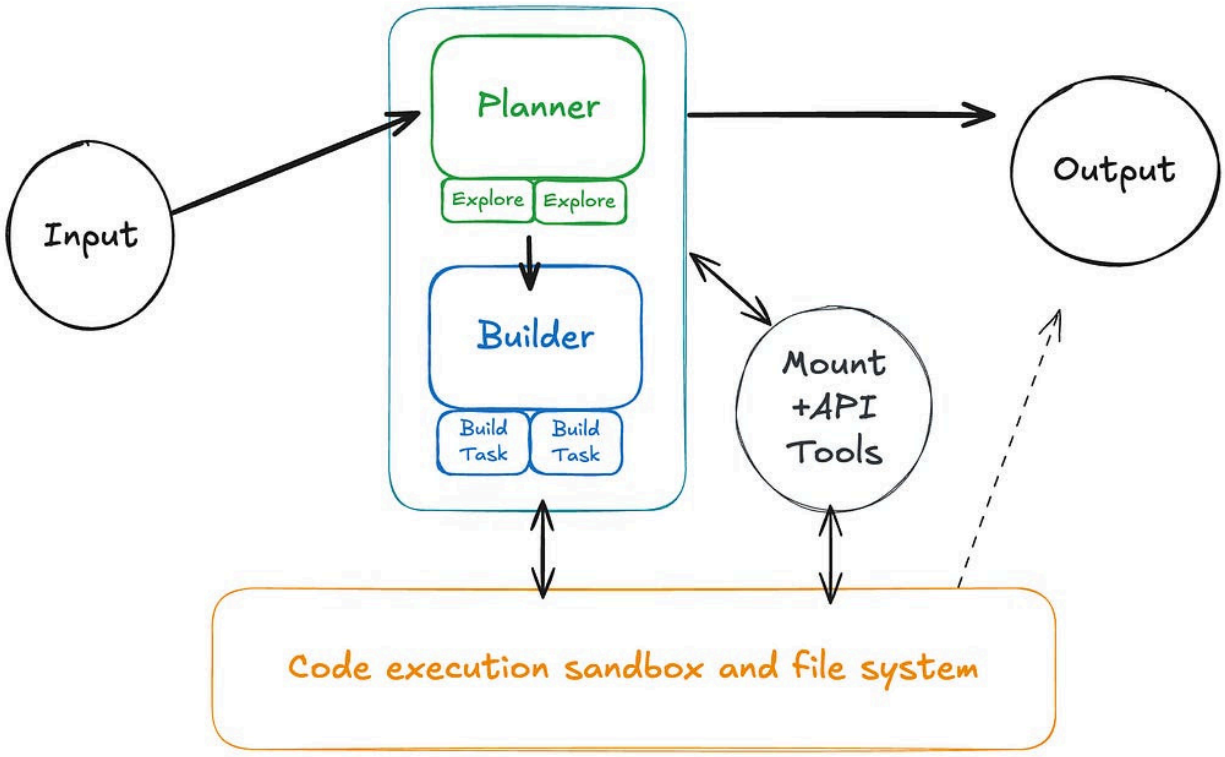

- In Part 1 (way back in December 2024), we were building highly domain-specific multi-agent systems. We had to augment the gaps in model capabilities by chaining together several fragile sub-agent components. At the time, it was unclear just how much raw model improvements would obsolete those architectures.
- In Part 2 (July 2025), LLMs had gotten significantly better. We simplified the architecture around "Orchestrator" agents and workers, and we started to see the first glimmer that scripting could be used for more than just data analysis.
- Now, here we are in Part 3 (January 2026), and the paradigm has shifted again. It is becoming increasingly clear that the most effective agents are solving non-coding problems by using code, and they are doing it with a consistent, domain-agnostic harness.

- It's now been over two years since I started working seriously with agents, and if there is one constant, it is that the "meta" for building them seems to undergo a hard reset every six months.
- In Part 1 (way back in December 2024), we were building highly domain-specific multi-agent systems. We had to augment the gaps in model capabilities by chaining together several fragile sub-agent components. At the time, it was unclear just how much raw model improvements would obsolete those architectures.

- In Part 2 (July 2025), LLMs had gotten significantly better. We simplified the architecture around "Orchestrator" agents and workers, and we started to see the first glimmer that scripting could be used for more than just data analysis.
- 
- Now, here we are in Part 3 (January 2026), and the paradigm has shifted again. It is becoming increasingly clear that the most effective agents are solving non-coding problems by using code, and they are doing it with a consistent, domain-agnostic harness.
- 
- 
- Cartoon via Nano Banana.
- In this post, I want to provide an update on the agentic designs I've seen (from building agents, using the latest AI products, and talking to other folks in agent-valley[1]) and break down how the architecture has evolved yet again over the past few months.
- 
- Thanks for reading Shrivu's Substack! Subscribe for free to receive new posts and support my work.
- 
- Subscribed
- What's the same and what's changed?
- We've seen a consolidation of tools and patterns since the last update. While the core primitives remain, the way we glue them together has shifted from rigid architectures to fluid, code-first environments.
- 
- What has stayed the same:
- 
- Tool-use LLM-based Agents: We are still fundamentally leveraging LLMs that interact with the world via "tools".
- 
- Multi-agent systems for taming complexity: As systems grow, we still decompose problems. However, the trend I noted in Part 2 (more intelligence means less architecture) has accelerated. We are relying less on rigid "assembly lines" and more on the model's inherent reasoning to navigate the problem space.
- 
- Long-horizon tasks: We are increasingly solving tasks that take hours of human equivalent time. Agents are now able to maintain capability even as the context window fills with thousands of tool calls. The human-equivalent time-horizon continues to grow[2].
- 
- What is different:
- 
- Context Engineering is the new steering: It is becoming increasingly less about prompt, tool, or harness "engineering" and more about "context engineering" (organizing the environment). We steer agents by managing their file systems, creating markdown guide files, and progressively injected context.
- 
- Sandboxes are default: Because agents are increasingly solving non-coding problems by writing code (e.g., "analyze this spreadsheet by writing a Python script" rather than "read this spreadsheet row by row"), they need a safe place to execute that code. This means nearly every serious agent now gets a personal ephemeral computer (VM) to run in.[3]
- 
- Pragmatic Tool Calling: We are moving toward programmatic tool calling where agents write scripts to call tools in loops, batches, or complex sequences. This dramatically improves token efficiency (the agent reads the output of the script, not the 50 intermediate API calls) and reduces latency.
- 
- Domain-agnostic harnesses: As models improve, the need for bespoke, product-specific agent harnesses is vanishing. For the last several agents I've built, it has been hard to justify maintaining a custom loop when I can just wrap a generic implementation like Claude Code (the Agents SDK). The generic harness is often "good enough" for 90% of use cases.
- 
- The Updated Multi-Agent Architecture

- As a side effect of these changes, the diverse zoo of agent architectures we saw in 2024/2025 is converging into a single, dominant pattern. I'll break this down into its core components.
-

-
- This diagram illustrates the convergence of agent design in 2026. We see the shift from rigid assembly lines to a fluid Planner and Builder (Execution Agent) loop, which spawns ephemeral Task Agents for sub-routines. Crucially, the entire system is grounded in a Code Execution Sandbox, allowing the agent to solve non-coding problems by writing scripts and leveraging Mount/API tools for massive context injection rather than fragile, individual tool calls.
- Planning, Execution, and Tasks
- One of the largest shifts in the last 18 months is the simplification and increased generalizability of subagents. In the past, we hand-crafted specific roles like "The SQL Specialist" or "The Researcher." Today, we are starting to see only see three forms of agents working in loops to accomplish a task:
-
- Plan Agents — An agent solely tasked with discovery, planning, and process optimization[4]. It performs just enough research to generate a map of the problem, providing specific pointers and definitions for an execution agent to take over.
-
- Execution Agents — The builder that goes and does the thing given a plan. It loads context from the pointers provided by the planner, writes scripts to manipulate that context, and verifies its own work.
-
- Task Agents — A transient sub-agent invoked by either a plan or execution agent for parallel or isolated sub-operations. This might look like an "explorer" agent for the planner or a "do operation on chunk X/10" for the execution agent. These are often launched dynamically as a tool-call with a subtask prompt generated on the fly by the calling agent.
-
- This stands in stark contrast to the older architectures (like the "Lead-Specialist" pattern I wrote about in Part 2), where human engineers had to manually define the domain boundaries and responsibilities for every subagent.
-
- Agent VMs

- These new agents need an environment to manage file-system context and execute dynamically generated code, so we give them a VM sandbox. This significantly changes how you think about tools and capabilities.
-
- Core VM Tool Design
- To interact with the VM, there is a common set of base tools that have become standard[5] across most agent implementations:
-
- Bash — Runs an arbitrary bash command. Models like Claude often make assumptions about what tools already exist in the environment, so it is key to have a standard set of unix tools pre-installed on the VM (python3, find, etc.).
-
- Read/Write/Edit — Basic file system operations. Editing in systems like Claude Code is often done via a replace(in_file, old, new) format which tends to be more reliable way of performing edits.
-
- Glob/Grep/LS — Dedicated filesystem exploration tools. While these might feel redundant with Bash, they are often included for cross-platform compatibility and as a more curated, token-optimized alias for common operations.
-
- These can be deceptively simple to define, but robust implementation requires significant safeguards. You need to handle bash timeouts, truncate massive read results before they hit the context window, and add checks for unintentional edits to files.
-
- Custom Tool Design
- With the agent now able to manipulate data without directly touching its context window or making explicit tool calls for every step, you can simplify your custom tools. I've seen two primary types of tools emerge:
-
- "API" Tools — These are designed for programmatic tool calling. They look like standard REST wrappers for performing CRUD operations on a data source (e.g., read_item(id) rather than a complex search_and_do_thing_with_ids(...)). Since the agent can compose these tools inside a script, you can expose a large surface area of granular tools without wasting "always-attached" context tokens. This also solves a core problem with many API-like MCP server designs.
-
- "Mount" Tools — These are designed for bulk context injection into the agent's VM file system. They copy over and transform an external data source into a set of files that the agent can easily manipulate. For example, mount_salesforce_accounts(...) might write JSON or Markdown files directly to a VM directory like ./salesforce/accounts/[6].
-
- Script-friendly Capabilities
- A script-powered agent also makes you more creative about how you use code to solve non-coding tasks. Instead of building a dedicated tool for every action, you provide the primitives for the agent to build its own solutions:
-
- You might prefer the agent build artifacts indirectly through Python scripts (PowerPoint via python-pptx) and then run separate linting scripts to verify the output programmatically, rather than relying on a black-box or hand-crafted build_pptx(...) tool.
-
- You can give the agent access to raw binary files (PDFs, images) along with pre-installed libraries like pdf-decode or OCR tools, letting it write a script to extract exactly what it needs instead of relying on pre-text-encoded representations.
-
- You can represent complex data objects as collections of searchable text files—for example, mounting a GitHub PR as ./pr/<id>/change.patch and ./pr/<id>/metadata.json so the agent can use standard grep tools to search across them.
-

- You might use a “fake” git repository in the VM to simulate draft and publishing flows, allowing the agent to commit, branch, and merge changes that are translated into product concepts.
- 
- You can seed the VM with a library of sample Bash or Python scripts that the agent can adapt or reuse at runtime, effectively building up a dynamic library of “skills”.
- 
- Context Engineering
- Context engineering (as opposed to tool design and prompting) becomes increasingly important in this paradigm for adapting an agnostic agent harness to be reliable in a specific product domain.
- 
- There are several great guides online now so I won’t go into too much detail here, but the key concepts are fairly universal. My TLDR is that it often breaks down into three core strategies:
- 
- Progressive disclosure — You start with an initial system prompt and design the context such that the agent efficiently accumulates the information it needs only as it calls tools.
- 
- You can include just-in-time usage instructions in the output of a tool or pre-built script. If an agent tries api_call(x) and fails, the tool output can return the error along with a snippet from the docs on how to use it correctly.
- 
- You can use markdown files placed in the file system as optional guides for tasks. A README.md in the VM root lists available capabilities, but the agent only reads specific files like docs/database_guide.md if and when it decides it needs to run a query.
- 
- Context indirection — You leverage scripting capabilities to let the agent act on context without actually seeing it within its context window.
- 
- Instead of reading a 500MB log file into context to find an error, the agent writes a grep or awk script to find lines matching “ERROR” and only reads the specific output of that script.
- 
- You can intercept file operations to perform “blind reads.” When an agent attempts to read a placeholder path like ./articles/<topic>.txt, the harness intercepts this write, performs a search, and populates the file with relevant snippets just in time.
- 
- Simplification — You use pre-trained model priors to reduce the need for context and rely more on agent intuition.
- 
- If you have a complex internal graph database, you can give the agent a networkx-compatible wrapper. The model already knows how to use networkx perfectly, so zero-shot performance is significantly higher than teaching it a custom query language.
- 
- If your system uses a legacy or obscure configuration format (like XML with custom schemas), you can automatically convert it to YAML or JSON when the agent reads it, and convert it back when the agent saves it.
- 
- TODOs, Reminders, and Compaction
- For agents that need to perform increasingly long-running tasks, we still can’t completely trust the model to maintain focus over thousands of tokens. Context decay is real, and status indicators from early in the conversation often become stale. To combat this, agents like Claude Code often use three techniques to maintain state:
- 
- Todos — This is a meta-tool the agent uses to effectively keep a persistent TODO list (often seeded by a planning agent). While this is great for the human-facing UX, its primary function is to re-inject the remaining plan and goals into the end of the context window, where the model pays the most attention.[7]
- 

- Reminders — This involves the harness dynamically injecting context at the end of tool-call results or user messages. The harness uses heuristics (e.g., "10 tool calls since the last reminder about X" or "user prompt contains keyword Y") to append a hint for the agent. For example: if user_focus.contains("checkout-button"); tool_result += "<hint>The user's focus is currently on the checkout button component.</hint>"
- 
- Automated Compaction — At some point, nearly the entire usable context window is taken up by past tool calls and results. Using a heuristic, the context window is passed to another agent (or just a single LLM call) to summarize the history and "reboot" the agent from that summary. While the effectiveness of resuming from a summary is still somewhat debated, it is better than hitting the context limit, and it works significantly better when tied to explicit checkpoints in the input plan.
- 
- Agent Checkup
- If you built an agent more than six months ago, I have bad news: it is probably legacy code. The shift to scripting and sandboxes is significant enough that a rewrite is often better than a retrofit.
- 
- Here is a quick rubric to evaluate if your current architecture is due for a refactor:
- 
- Harness: Are you maintaining a domain-specific architecture hardcoded for your product? Consider refactoring to a generic, agnostic harness that delegates domain logic to context and tools, or wrapping a standard implementation like the Agents SDK.
- 
- Capabilities: Are your prompts cluttered with verbose tool definitions and subagent instructions? Consider moving that logic into "Skills" (markdown guides) and file system structures that the agent can discover progressively.
- 
- Tools: Do you have a sprawling library of specific tools (e.g., resize_image, convert_csv, filter_logs)? Consider deleting them. If the agent has a sandbox, it can likely solve all of those problems better by just writing a script.
- 
- Open-Questions
- We are still in the early days of this new "agent-with-a-computer" paradigm, and while it solves many of the reliability issues of 2025, it introduces new unknowns.
- 
- Sandbox Security: How much flexibility is too much? Giving an agent a VM and the ability to execute arbitrary code opens up an entirely new surface area for security vulnerabilities. We are now mixing sensitive data inside containers that have (potentially) internet access and package managers. Preventing complex exfiltration or accidental destruction is an unsolved problem.
- 
- The Cost of Autonomy: We are no longer just paying for inference tokens; we are paying for runtime compute (VMs) and potentially thousands of internal tool loops. Do we care that a task now costs much more if it saves a human hour? Or are we just banking on the "compute is too cheap to meter" future arriving faster than our cloud bills?
- 
- The Lifespan of "Context Engineering": Today, we have to be thoughtful about how we organize the file system and write those markdown guides so the agent can find them. But is this just a temporary optimization? In six months, will models be smart enough (and context windows cheap enough) that we can just point them at a messy, undocumented data lake and say "figure it out"?

Minteh, te admiramos, hermano. Estás representando a Gambia y a todos nosotros.
Eres un atacante con un talento extraordinario. No dejes que este sistema defensivo mate tu instinto.
Arriesga más. Enfréntate a los defensas. Dispara. Esa es tu fortaleza. Sabemos que puedes replegarte, pero
Gambia necesita goles. Juega con tus puntos fuertes y confía en ti mismo. Los goles llegarán

Siempre se entrega al máximo por el Brighton y siempre supone un peligro para nosotros en el ataque; ha recibido algunas críticas esta temporada, lo cual me parece injusto. Aún tiene solo 21 años y todavía no es un producto terminado; siempre estaría en mi once titular del Brighton 👊

## ENGINEERING EDUCATION EXPERIENCE

**Systems Engineer 2 | STC | January 2022-January 2023**

- *Hold up to $50,000 in General Dynamics IT stock,* ***to be amended at age 40***
- *Hold up to $54,556 in General Dynamics IT stock,* ***to be amended at age 40***
- *Hold up to $50,000 in General Dynamics IT stock,* ***to be amended at age 40 only***
- *Hold up to $23,000 in Lockheed Martin stock*
- *Hold up to $93,600.40 in Lockheed Martin stock*

**Cloud Systems Engineer, Peraton, June 2020-April 2022**

- Ensure the 24x7 uptime of our multi-service, multi-layer, multi-tenant cloud infrastructure
- This position is hands-on, requiring the ability to provide first-level system and network support problem investigation, resolution, or escalate as needed
- Work closely with the engineering teams to improve our platforms and eliminate complexity from architecture and processes
- Utilize a Jira Service Desk ticketing queue for tracking system and tenant issues through resolution
- Configure and use state-of-the-art monitoring tools to assist with troubleshooting and remediation of issues
- Responsible for the monitoring the daily software and network operations in a distributed multi-tenant, multi-layer, cloud environment
- Conduct incident response and in-depth root cause analysis
- Understand and troubleshoot complex network data flow issues for Palo Alto firewalls and Arista switches
- Document new procedures/update existing procedures utilizing Confluence and follow SOPs for conflict resolution
- This job will include shift work to allow for complete 24x7 monitoring of software systems.  Will need to have flexibility to work multiple shifts (day, mid, swing), as needed.

***General Dynamics Information Technology, Marine Bomb Engineer, June 2026-Present***

***General Dynamics Mission Systems, Marine Bomb Engineer, May 2026-Present***

*The Engineer, Construction, Facilities, and Equipment occupational field comprises Marines whose duties include metalworking and welding; repair, maintenance, and operation of engineer heavy equipment such as cranes and bulldozers; construction and repair of military structures and facilities; clearing and emplacing obstacles such as minefields; construction of standard and nonstandard bridging; and emplacing and detonating explosives for construction and demolition projects. Also, some Marines in the field work with the storage and distribution of bulk fuel products. The opportunity to participate in a formal apprenticeship program leading to receipt of a Department of Labor Certificate of Apprenticeship Completion may be available in some MOSs within occupational field 13. There are a variety of challenging and interesting billets available in occupational field 13, ranging from inspector-instructor duty, to duty with operating forces (MARDIV, MLG, or MAW) or the supporting establishment.*

*A typical first tour assignment for a Combat Engineer is within a Combat Engineer Battalion (CEB) as part of the GCE, Engineer Support Battalion (ESB) as part of the LCE, or Marine Wing Support Squadron (MWSS) as part of the ACE of the MAGTF. There are CEBs subordinate to 1st and 2nd MARDIV as well to 4th MARDIV as part of MARFORRES: 1st CEB aboard MCB Camp Pendleton, CA (1st MARDIV); 2nd CEB aboard MCB Camp Lejeune, NC (2nd MARDIV); and 4th CEB in Baltimore, MD (4th MARDIV). Combat Engineers assigned to a CEB in their first tour may serve as a Platoon Commander in direct support of an infantry battalion or battalion landing team (BLT) and are responsible for training and employing their platoon and engineer equipment in support of the battalion's scheme of maneuver.*

*There are ESBs subordinate to each MEF as well as the reserve MLG: 7th ESB aboard MCB Camp Pendleton, CA (1st MLG); 8th ESB aboard MCB Camp Lejeune, NC (2nd MLG); 9th ESB aboard MCB Camp Hansen, Okinawa, Japan (3rd MLG); and 6th ESB in Portland, OR (4th MLG). Combat Engineers assigned to an ESB in their first tour may serve as a Platoon Commander within the Engineer Support Company, Combat Engineer Company, or Bridge Company and are responsible for training and employing their platoon to be able to provide combat engineering and limited general engineering, bulk liquid, and utility support to the MAGTF. There are MWSSs subordinate to each active duty and reserve MAW. See Appendix C, D, E, and F for the location of each MWSS. Combat Engineers assigned to an MWSS in their first tour may serve as a Platoon Commander of the Heavy Equipment Platoon, Utilities Platoon, or Combat Engineer Platoon within the Engineer Operations Division and are responsible for training and employing their platoons to provide limited combat and general engineering support to designated components of the ACE.*

**Lockheed Martin TAMNG *Project***, (Late May) 2026-Present (*late October 2023)*-Present

**Lockheed Martin TAMNG *Project***, June 2026-Present

- **Have Remy TMP:** A 2026 project where Skunk Works used AI-piloted fighters to test evasive manuevers against missiles in real-time, bringing classroom AI training to the cockpit.
- **Golden Dome for America:** A C2 (command and control) prototyping hub focused on AI/ML integration for missile defense to create “connected” solutions from previously disconnected systems.

***International 9300i Eagle Engines***

The **International 9400i Eagle** is an unlockable vehicle in the BEAMNG.drive TAMNG game, which can be unlocked in Ford Challenge mode. The car is a 2-door, heavy-duty pickup truck, built as a concept that was meant to showcase the latest turbo-diesel engine it was equipped with at that time.

In the game, the car has a decent top speed with an average acceleration. However, it has one of the worst handling and is also the heaviest in its class. Therefore, it may struggle to turn properly on sharp turns without braking a lot. Despite that, it is relatively quick and can easily outrun the other opponents on straightaways.

***1994.5 Ford Powerstroke Concept Engines***

The **1994 Ford Powerstroke Concept** is an unlockable vehicle in the Modern class, which can be unlocked in Ford Challenge mode. The car is a 2-door, heavy-duty pickup truck, built as a concept that was meant to showcase the latest turbo-diesel engine it was equipped with at that time.

In the game, the car has a decent top speed with an average acceleration. However, it has one of the worst handling and is also the heaviest in its class. Therefore, it may struggle to turn properly on sharp turns without braking a lot. Despite that, it is relatively quick and can easily outrun the other opponents on straightaways.

**LIFE INSURANCE ELECTRICAL ENGINEER | April 2024-April 2026-Present |** *Globe Life Inc., Lindy Kyzer*

*Lockheed Martin Corp., Fort Worth, Texas, is awarded a $2,293,000,000 cost-plus-incentive-fee indefinite-delivery/indefinite-quantity contract to provide initial non-recurring sustainment activities and services, including site activation, interim contractor support, fleet management, and reliability and maintainability improvement plan in support of establishing new operational sites, one-time setup of both land-based and at-sea fleet support operations including initial engineering and technical sustainment services the F-35 Lightning II Joint Strike Fighter Air Systems for the Air Force, Marine Corps, Navy, Foreign Military Sales customers, and F-35 Cooperative Program Partners. Work will be performed in Fort Worth, Texas (85%); and Orlando, Florida (15%), and is expected to be completed in December 2028. No funds will be obligated at the time of award; funds will be obligated on individual orders as they are issued. This contract action was not competed. Naval Air Systems Command, Patuxent River, Maryland, is the contracting activity (N0001926D0010).*

*Sikorsky Aircraft Corp., a Lockheed Martin Co., Stratford, Connecticut, is awarded a not-to-exceed $525,000,000 firm-fixed-price, cost-plus-fixed-fee, cost reimbursable indefinite-delivery/indefinite-quantity contract to provide highly specialized non-recurring engineering, integration, and flight-test support for the development and modernization of the Y/CH-53K Heavy Lift Helicopter program. Efforts include the design, development, testing, verification, and validation of product improvements, as well as the integration and qualification of advanced technologies to enhance aircraft capability, performance, and reliability for the Marine Corps, Navy and a Foreign Military Sales customer. Work will be performed in Stratford, Connecticut (65.2%); West Palm Beach, Florida (19.93%); Fort Worth, Texas (4.79%); Trumbull, Connecticut (3.16%); King of Prussia, Pennsylvania (1.43%); Rochester, Minnesota (1.12%); and various locations within the continental U.S. (4.37%), and is expected to be completed in June 2031. No funds will be obligated at the time of award; funds will be obligated on individual orders as they are issued. This contract action was not competed. Naval Air Systems Command, Patuxent River, Maryland, is the contracting activity (N0001926D1005).*

*Krempp Construction Inc.* Jasper, Indiana, is awarded a firm-fixed-price, indefinite-delivery/indefinite-quantity contract (N4008526-D-0013) with a maximum amount of $45,000,000 for magazine maintenance and repairs at Naval Weapons Station Crane. Work will be performed at Crane, Indiana. The term of the contract is not to exceed 60 months with an expected completion date of June 2031. Fiscal 2026 working capital (Army) contract funds in the amount of $2,500 are obligated at time of award and will not expire at the end of the current fiscal year. This contract was competitively procured via Sam.gov, with one offer received. Naval Facilities Engineering Systems Command Mid-Atlantic, Norfolk, Virginia, is the contracting activity.*

*Walashek Industrial & Marine Inc.,* Norfolk, Virginia, is awarded a $9,723,782 firm-fixed-price level-of-effort modification to a previously awarded contract (N00024-26-C-4434) to exercise an option for the accomplishment of maintenance, modernization, and repair of the steam propulsion plant systems on USS Iwo Jima (LHD 7) during the scheduled fiscal 2026 selected restricted availability. Work will be performed in Norfolk, Virgina, and is expected to be completed by May 2028. Fiscal 2026 other procurement, (Navy) funds in the amount of $9,723,782 will be obligated at the time of award and will not expire at the end of the current fiscal year. Naval Sea Systems Command, Washington, D.C., is the contracting activity.*

*AIR FORCE*
*Eiffage Infraestructuras SAU, Sevilla, Spain (FA5575-26-D-0001); UTE Programa, Sevilla, Spain (FA5575-26-D-0002); Sociedad Espanola de Montajes Industriales SA, Sevilla, Spain (FA5575-26-D-0003); Elecnor Servicios y Proyectos SAU, Sevilla, Spain (FA5575-26-D-0004); JJEX Construction JV LLC, Sevilla, Spain (FA5575-26-D-0005); Dragados Sociedad Anonima, Sevilla, Spain (FA5575-26-D-0006); and Cox T&I SL, Sevilla, Spain (FA5575-26-D-0007), were awarded a maximum $400,000,000 firm-fixed-price, indefinite-delivery/indefinite-quantity multiple-award construction contract supporting Morón Air Base, Spain. This contract provides for a broad range of design-build, sustainment, maintenance, repair, alteration, renovation, and minor construction projects. Work will be performed at Morón de la Frontera, Sevilla, Spain, and is expected to be completed by June 11, 2036. These contracts were competitive acquisitions and thirteen offers were received. Fiscal 2026 operations and maintenance funds in the amount of $35,000 are being obligated at time of award. The 496th Air Base Squadron, Morón Air Base, Morón de la Frontera, Sevilla, Spain, is the contracting activity.*

*Nextgen Federal, Morgantown, West Virginia, has been awarded a ceiling $14,081,185 cost-type contract for the Enterprise Environmental Portal E2P, named BIFROST. This contract provides for integration of artificial intelligence and machine learning to assist with workflow management, command and control, and production of weather products. Work will be performed at Morgantown, West Virginia, and is expected to be completed by June 21, 2030. This contract was a sole source acquisition. Fiscal 2026 operations and maintenance and research and development funds in the amount of $1,475,062 are being obligated at time of award. The Air Force Life Cycle Management Center, Hanscom Air Force Base, Massachusetts, is the contracting activity (FA2330-26-C-B007). (Awarded May 22, 2026)*

*DEFENSE LOGISTICS AGENCY*
*Top Flight Aerostructures Inc., doing business as Top Flight Aerostructures Inc., Dallas, Georgia, has been awarded a maximum $53,078,535 firm-fixed-price, indefinite-delivery/indefinite-quantity contract for B-1 aircraft trailing edges. This was a competitive acquisition with two responses received. This is a three-year contract with no option periods. The performance completion date is June 12, 2029. Using military service is Air Force. Type of appropriation is fiscal 2026 through 2029 defense working capital funds. The contracting activity is Defense Logistics Agency Weapons Support, Oklahoma City, Oklahoma (SPRTA1-26-D-0004).*

*Symetrics Industries LLC, doing business as Extant Aerospace Inc., Melbourne, Florida, has been awarded a maximum $9,652,500 firm-fixed-price contract for F-16 battery chargers. This was a sole-source acquisition using justification 10 U.S. Code 3204 (c)(1), as stated in Federal Acquisition Regulation 6.103-1. This is a three-year contract with no option periods. The performance completion date is Aug. 1, 2029. Using military service is the Air Force. Type of appropriation is fiscal 2026 working capital funds. The contracting activity is Defense Logistics Agency Weapons Support, Tinker Air Force Base, Oklahoma (SPRTA1-26-C-0063).*

*DEFENSE FINANCE AND ACCOUNTING SERVICE*
*CACI Inc.-Federal, Chantilly, Virginia, is being awarded an incrementally funded, labor-hour contract option (P00004) with a maximum value of $16,143,928 for Comptroller mission applications systems support for the Office of the Under Secretary of Defense (Comptroller). This modification exercises Option Year One with a period of performance of June 16, 2026, through June 15, 2027. The modification brings the total cumulative face value of the contract to $34,256,694 from $18,112,766. Work will be performed in Arlington, Virginia, with an expected completion date of June 15, 2027. Fiscal 2026 Office of the Undersecretary of Defense (Comptroller) defense-wide operations and maintenance funds in the amount of $9,332,019 are being obligated at the time of the award. The Defense Finance and Accounting Service, Contract Services Directorate, Columbus, Ohio, is the contracting activity (HQ042325FE049).*

**Small business*

***Tuition Assistance | Requested***

- ***Stetson University - Requires 4.32 GCPA***
- ***Virginia Union University - Requires an 4.64 GPA***
- ***AWS AI Practitioner | 532 | Requires 1152 PhDs***
- ***AWS Data Engineer Associate | 682 | Requires 1336 PhDs***
- *Senior Systems Engineer 2 | STC | Requires 12 PhDs*
- Associate Software Engineer, Boeing, Requires 2 Associate's Degrees and 2 Master's Degrees
- Associate Software Engineer, Avionics Software Incorporated, Requires 2 Associate's Degrees and 2 Master's Degrees
- *Associate Software Engineer, Koniag Government Services, Requires 2 Associate's Degrees and 2 Master's Degrees*
-

*Tuition Assistance | Waiver | Requested | Holds 2 PhDs | DA-LOA-20250701-00129*

- *AWS MLA-C01, Requires 1,223 PhDs*
- *AWS MLS-C01, Requires 11,520 PhDs*
- *AWS AIF-C01, AI Practitioner, Requires 111,520 PhDs*
- ***Stetson University, Requires 4.32 GPA***

*Tuition Assistance | Waiver | Requested | Holds 8 PhDs | DA-LOA-20250701-00129*

- *AWS AI Practitioner, Requires 1,115,523 PhDs*
- *Senior Systems Engineer 2 | STC | Requires 10 PhDs*

***Hyperthemia, Wilbur Austin Lainez Meija, accnr dismissed | Ability to lift up to 1150 lbs.***

- Owns any International DT466E engine
- Owns any 1956 Austin-Healey 356GT coupe

***JME LEE, also owns, any, Bains,***

- 2020-2023 Mazda CX-5 Diesel

- 2020-2023 Mazda CX-9 Diesel
- Toyota Innova Previa 2.4D OR& 3.1D
- *Toyota Merkur BMW ETK 1080i*
- 1962 Toyota Corolla Cross ***1-FUEL Injector***

IB Diploma #318 | FULL TEXT | Confiscated and Unconfiscated from Remy A. Sauvage

“The George Washington University Center for Equity and Excellence in Education’s mission is to advance education reform so all students achieve to high standards.
GW-CEEE conducts policy and applied research, designs and implements programme evaluations, and provides professional development and technical assistance for clients in state education agencies, school districts, schools, foundations, and federal agencies.
GW-CEEE
The George Washington University Center for Equity & Excellence in Education”

**Academic Language Pedagogy: Professional Development and Instruction**

In order to provide effective instruction in the academic language needed for success in the content areas, teachers must be prepared to integrate academic language teaching into the teaching of the disciplines (Bunch, 2013; Heritage, Silva & Pierce, 2007; Wong-Fillmore and Snow, 2000). High-quality professional development programs targeting academic language instruction, which are embedded into professional learning communities and well supported via school and district leadership and access to resources (Leaning Forward, 2012), can result in improvements in student performance (Kim et al., 2011; Anstrom et al. 2010; Dicerbo, Anstrom, Baker & Rivera, 2013).

MIDDLE SCHOOL DIPLOMA #319 | FULL TEXT

1.2.1 IBM WebSphere Application Server versión 5.0. WebSphere Application Server 5.0 es una plataforma de comercio electrónico ágil y de eficacia probada, diseñada para satisfacer las exigencias empresariales actuales. WebSphere Application Server V5 facilita la reducción de costes generales, la mejora de la fidelidad del cliente y la rápida adaptación a nuevas oportunidades de negocio. Al actuar como un sistema operativo para Internet, WebSphere Application Server V5 ofrece:

1. Una plataforma de integración integral basada en estándares abiertos
2. Un entorno de desarrollo de aplicaciones altamente integrado
3. Despliegue y administración ágiles de aplicaciones
4. Optimización inteligente de aplicaciones de extremo a extremo: WebSphere se integra plenamente con la plataforma de desarrollo de aplicaciones WebSphere Studio, basada en el proyecto de código abierto Eclipse. Este entorno combinado de desarrollo y despliegue permite reducir el tiempo de comercialización de nuevas aplicaciones y lograr mejoras significativas en la reutilización de activos en toda la organización y a lo largo del tiempo. WebSphere Application Server V5 ofrece diversas configuraciones para permitir que una empresa evolucione sin problemas desde un nivel básico a uno sofisticado, según lo requieran sus necesidades. Las rutas de migración y la compatibilidad ascendente están claramente definidas. Dicha ruta incluye: WebSphere Application Server - Express, que proporciona una vía de acceso sencilla al comercio electrónico; WebSphere Application Server, que ofrece plena conformidad con J2EE 1.3 en un entorno distribuido con diversas

plataformas y múltiples sistemas empresariales en el *back-end* (sistema de gestión interna). La configuración de despliegue en red ofrece opciones de agrupación en clústeres y gestión de cargas de trabajo. WebSphere Application Server Enterprise, que proporciona servicios adicionales de integración, marcos de trabajo para aplicaciones y despliegue, diseñados para simplificar entornos empresariales mixtos y complejos.

## Peraton | Cyber Systems Administrator | Williams, Shafiq, R.

## Bryse Ginigum Resume

- Has AWS cert
- Fairy toothbrush mouthwash formally tastes like cereal
- Fairy toothpaste tastes like cereal
- Ability to lift up to 350 pounds (sizothymia)
- Protein_bucket
- CompTIA Security+ ce PenTest+ ce certification
- Toothbrush cleaning

- Toothpick cleaning
- FAIRY ® deodorant
- FAIRY ® toothpaste
- Simpli safe can keep you simpli safe
- Internet Security
- Chemical Handling
- Mechanical Troubleshooting
- Operations & Maintenance
- *Has 2004 Ford Scheduled Maintenance Service Guide*
- *Has 2004 Ford Scheduled Maintenance Service Guide available as a .pdf*
- Maintenance
- DevSecOps
- Welding
- Standard Operating Procedure (SOP)
- Systems Engineering
- Network Security & Information Security
- REST APIs
- SharePoint
- AWS Command Line Interface (CLI)
- Microsoft Access - System Engineer at SAIC
- Amazon Web Services (AWS)
- Unix (Linux)
- Unix (Linux)
- Python
- Visio
- Microsoft Office
- Linux
- *JonsieberleviCoffee*
